

Bad Prompts to Fix:

1. "Make a business plan."
2. "Tell me about customers."
3. "Write an email."
4. "Give me ideas."
5. "How can I do better?"

"Make a business plan."

"Here's a specific industry to a business I'd like for you to develop an LLC and business plan for. This LLC could also be represented as a C Corp or S Corp. As you develop this LLC's business plan, ensure that it contains the necessary elements to a corporate business plan such as an executive summary, mission statements, and SWOT analysis.

This one specifies legal tax structures that every business in the United States tends to encompass. In addition to legal tax structures, it also provides context for what is necessary for a formal business plan.

"Tell me about customers."

"Here's a data frame that allocates all the geospatial and digital causation regression trees on our customers and their activities throughout the company. Tell me about what you can learn objectively that hasn't been realized or understood by the company before."

This one incorporates a digital causation regression tool, which is a way of making a machine digitally audit every causation (decision or event) that is made over a period of time. Adding this allows for a better frame of reference to understand what customers have been doing and what they might be up to.

"Write an email."

"Here's the subject line to an email that hasn't been written yet. The email should include a greeting, a body paragraph providing context, and another providing a conclusion, as well as a closing goodbye. Write the email in correspondence to the subject line.

Given the emails specific formality with subject lines and greetings, this prompt provides the users a template to fill out their emails with just subject lines. As well as providing space for two body paragraphs that fill in context and a conclusion from that context.

"Give me ideas."

"Here's a problem without an immediate or clear solution. Previous attempts to remove or resolve the problem resulted in x, y, and z. One prime contender to the solution is a, b, and c but requires d, e, and f. What are steps or approaches to consider that can allow for a breakthrough to develop or even improve upon a, b, and c where it fails?"

Ideas are created by the lack of ideas! Usually if there's a stump or an assumption of no solution, cross-referencing previous attempts to current solutions can bridge gaps to bottlenecks that are currently encountered. This also allows for newer ideas to be made and created based off of the already made and working solutions provided to its dataset.

"How can I do better?"

"Here's a GitHub file containing all the miscellaneous corporate, educational, and medical paperwork I've ever received, as well as a digital copy of a notebook containing personal journal entries from previous family members and my own personal journal. Using paystubs, medical discharges, homework assignments, personal journals, and other media as a source. Identify a pipeline that can spot bottlenecks and improvements for more opportunities in my life, as well as creating branches that would've otherwise been considered lost opportunities."

This one literally uploads your life into one place. The more data that you can provide to feed causation regression auditing algorithms, the more effectively it's able to provide solutions to current or even past problems that are ongoing and perhaps were overlooked and forgotten. This allows for a more objective timeline on events rather than to work off of intuition and personal reflection alone.

5 Created Prompts:

1. **Marketing Research:**
You are launching a new eco-friendly water bottle brand. You need to know what competitors are doing in this market.
2. **Customer Service Response:**
A customer left a negative review online about a late delivery. You want to respond politely and professionally.
3. **Social Media Strategy:**
Your team wants ideas for TikTok content to promote a local coffee shop to college students.
4. **Time Management Help:**
You're feeling overwhelmed as a small business owner juggling tasks. You want tips to organize your week better.
5. **Job Description Writing:**
You need to hire a part-time social media assistant. You want help writing a clear and professional job description.

Marketing Research:

"I'm launching a new brand called, "Vegan Water" so I can replace all my employees with robots when it goes military. Before I lie to my investors, I need to know what competitors are doing in this market. Using this PDF that contains a formal business plan and SWOT chart, compare and position "Vegan Water" with companies that operate the same way and more effectively as to create a reference for what "Vegan Water should do to improve as well as to identify the opportunities it holds in comparison to those other companies."

This prompt is written with enough to allow the LLM to understand the direction to take with "Vegan Water" on a long term scale, which also gives a better idea as to the positioning it determines alongside other companies. Providing context to position your company next to others allows for the LLM to understand the bottlenecks your company faces now and later on in the future. These current bottlenecks once resolved also give a trajectory for your company to

operate alongside other competitors that have resolved all the other solutions you've resolved, providing opportunities to reach breakthroughs in places where they no longer find solutions.

Customer Service Response:

“Relay the incident back to the customer as to demonstrate the identification and understanding of the problem at hand. After relaying the incident with concern, express sympathy and apology for the incident occurring and ask if they'd like to move forward with the automated selection of options they have to resolve the issue.”

Relaying the incident always ensures accountability, and doesn't make for the customer to feel as if the incident is brushed off or unacknowledged. Acknowledging the incident following a decision tree for solutions allows for a more personalized approach to solve problems.

Social Media Strategy:

“Based on viral content that's been posted on Tik Tok, and based on their virality and speed to gain virality, generate a script that can be produced by humans that generates the same virality for a coffee shop to college students.”

This one allows for both humans and AI to work together without replacing their jobs. AI is able to generate the scripts based on a formula for virality that proves effective every time. This formula, once applied to a script writing team, allows for endless creativity from the writers, actors, and directors to create content without having to scout and research for the best forms of delivery and outreach.

Time Management Help:

“Here's the schedule and a workflow chart that can detail a day to day for a small business that's been delayed with multiple tasks. Using data frames, excel sheets, time cards, memos, daily reports, and meeting minutes, help create a better schedule and workflow environment, as well as finding a means to double the productivity from the initial revamp as a way to start freeing more parts of the day as time goes on, eventually having the business run itself entirely.”

This prompt gives the LLM enough context as to what's going on with your business and the way that it operates on a day to day basis so it better understands a method to organize the workflow environment to your comfort and time adjustment. Not only that, this prompt encourages productivity automation to double overtime that allows the business to run itself as more data is input from the business.

Job Description Writing:

“Using a real-time intercommunicative Performance Management, Human Resource Information, and Application Tracking System that allocates all PMS-HRIS-ATS data from every company in the corporate onboarding and administrative industry (Google, LinkedIn, Salesforce, etc.) , find the BEST of the BEST social media assistants and talent pools that are also documented to have made significant and undisclosed breakthroughs via causation regression auditing systems. Based on the talent pool or individuals previous applications, help write a clear and professional job description that will guarantee their attention and interest to apply.

This one incorporates an AI tool that combs the entire PMS-HRIS-ATS world for specific individuals or talent pools that have either never been identified or given a chance to apply

themselves on larger scales. Once a target is selected, a job application can be generated personally for them as a means to effectively gain their attention and interest.
