Case

ARGeoAnchor.AltitudeSource.userDefined

The app defines the altitude.

iOS 14.0+ | iPadOS 14.0+

case userDefined

Discussion

ARKit records this altitude source when your app defines a geo anchor’s altitude.

You may acquire altitude by providing a particular scene coordinate to the session using `getGeoLocation(forPoint:completionHandler:)`.

For example, your app might set a geo anchor’s altitude by raycasting a surface, then adding an arbitrary y–amount to make the anchor more visible from afar.

See Also

Sources

case precise

The framework sets the altitude using a high-resolution digital-elevation model.

case coarse

The framework sets the altitude using a coarse digital-elevation model.

case unknown

Altitude isn't yet set.
