AR Quick Look

≡ Filter

/

[ARKit](#) / [ARGeoAnchor](#) / altitudeSource

Instance Property

altitudeSource

A record of the source from which an altitude came.

iOS 14.0+ | iPadOS 14.0+

```
var altitudeSource: ARGeoAnchor.AltitudeSource { get }
```

Discussion

The value of this property is [ARGeoAnchor.AltitudeSource.userDefined](#) if you set the altitude yourself (see [getGeoLocation\(forPoint:completionHandler:\)](#)).

If your app doesn’t set the altitude, ARKit populates this property to indicate the altitude’s expected accuracy (either [ARGeoAnchor.AltitudeSource.precise](#), or [ARGeoAnchor.AltitudeSource.coarse](#)), depending on the level of confidence ARKit has with the altitude data that’s available at the time.

See Also

Defining Altitude

```
var altitude: CLLocationDistance?
```

Vertical distance, in meters, between this anchor and sea level.

```
enum AltitudeSource
```

Options for setting a location anchor’s altitude.
