Oakland, Alameda welcome Marine high-tech exercise

By **DAN VERTON** // FCW // FEBRUARY 4, 1999

Just one week after San Francisco rebuffed a Marine Corps proposal to hold a major exercise there, two other cities have agreed to host the Marines' Urban Warrior, which will test the use of information technology to support military operations in a city setting.

Just one week after San Francisco rebuffed a Marine Corps proposal to hold a major exercise there, two other cities have agreed to host the Marines' "Urban Warrior," which will test the use of information technology to support military operations in a city setting.

According to a spokesperson for the Marine Corps Warfighting Laboratory, Quantico, Va., the California cities of Oakland and Alameda have agreed to allow the Marines to hold a week-long military exercise focused on humanitarian assistance, disaster relief and urban security.

Originally planned for San Francisco, the Marines' Urban Warrior Advanced Warfighting Experiment was put on hold temporarily last week after officials from the National Park Service and the Presidio Trust turned down the Corps' request for a permit, citing environmental and safety concerns.

"All of the experiments are intact," a spokesperson for the Warfighting Laboratory said. "We're still going to have three-block war-type operations," and all of the technology experiments involving the Experimental Combat Operations Center—a computer-assisted planning and decision-making operation—will still take place, the spokesperson said.

In addition to the four-day Urban Warrior exercise, the Corps also will hold a three-day technology exposition that will be open to the public. The event will display more than 60 technologies and weapons as well as demonstrations by Marine and Navy bands and drill teams.

Dell names Buchsbaum head of federal division

By **DIANE FRANK** // FCW // FEBRUARY 3, 1999

SAP America Public Sector Inc. today announced that its SAP R/3 product, training and consulting services are on the General Services Administration's Financial Management Systems Software (FMSS) schedule.

Dell Computer Corp. has named Tom Buchsbaum as its new leader for Dell's federal division, effective Feb. 1.

Buchsbaum, former president of Zenith Data Systems federal division and, most recently, head of Dell's education division, took over as vice president and general manager of Dell Federal sales from Bob McFarland.

As head of Dell's federal division, McFarland guided the computer manufacturer to the top of the General Services Administration schedule. In fiscal 1998, Dell's federal sales of $462 million beat out its nearest competitor, Gateway Inc., by more than $200 million.

McFarland is leaving the federal market to become vice president and general manager of Dell's Global/National business.
