

Principles for Church Use of Artificial Intelligence

[English](#) | [Español](#) | [Português](#) | [Français](#) | [Deutsch](#) | [Italiano](#) | [日本語](#) | [한국어](#) | [Русский](#) | [繁體中文](#)

Artificial Intelligence (AI) is a rapidly developing technology that has significant potential to assist the Church in accomplishing God’s work of salvation and exaltation. Properly using AI will help the Church achieve its divine purposes more effectively and efficiently.

The moral and ethical considerations that come with the use of AI require wisdom and good judgment. God is the source of all truth (see John 14:6; Doctrine and Covenants 93:24–26). AI does not replace divinely appointed sources, but, if used correctly, it can be a powerful tool for helping earnest seekers of truth search and access such sources (see Moroni 10:5; Doctrine and Covenants 50:17–20; *General Handbook: Serving in The Church of Jesus Christ of Latter-day Saints*, 38.8.41, Gospel Library).

Spiritual Connection

- The Church will use artificial intelligence to support and not supplant connection between God and His children.

- The Church will use artificial intelligence in positive, helpful, and uplifting ways that maintain the honesty, integrity, ethics, values, and standards of the Church.

Transparency

- People interacting with the Church will understand when they are interfacing with artificial intelligence.
- The Church will provide attribution for content created with artificial intelligence when the authenticity, accuracy, or authorship of the content could be misunderstood or misleading.

Privacy and Security

- The Church's use of artificial intelligence will safeguard sacred and personal information.

Accountability

- The Church will use artificial intelligence in a manner consistent with the policies of the Church and all applicable laws.
- The Church will be measured and deliberate in its use of artificial intelligence by regularly testing and reviewing outputs to help ensure accuracy, truthfulness, and compliance.
