

Objective-C Runtime / ...

Class

NSObject

The root class of most Objective-C class hierarchies, from which subclasses inherit a basic interface to the runtime system and the ability to behave as Objective-C objects.

iOS 2.0+ | iPadOS 2.0+ | Mac Catalyst 13.1+ | macOS 10.0+ | tvOS 9.0+ | visionOS 1.0+ | watchOS 1.0+

```
class NSObject
```

Topics

Initializing a Class

- class func `initialize()`

Initializes the class before it receives its first message.
- class func `load()`

Invoked whenever a class or category is added to the Objective-C runtime; implement this method to perform class-specific behavior upon loading.

Creating, Copying, and Deallocating Objects

- `init()`

Implemented by subclasses to initialize a new object (the receiver) immediately after memory for it has been allocated.
- func `copy()` -> Any
